

Fansteel with Fife

Resources:

- Sharepoint file from Fife
- “what can be done” from Fife
- ODEQ – Libby McCaskill and Amy Britton
- NRC – Greg Chapman Gregory.chapman@nrc.gov
- EPA Elizabeth Pleton is EPA attorney
- EPA Lance Nixon – Enforcement Officer
- Richard Gladstein DOJ attorney on case (good for cost recovery)
- James Burgess – Fansteel employee on-site
- Sam Cheek (START) – Has worked on site
- START report from removal action – in SEMS

Notes

- Not on tribal property, but close Cherokee are interested in buying
- City has not been too involved
- If it “ranks” it goes on the NPL and remedial can spent their money on it. Or they can give us some money and we can oversee cleanup. Or remedial can oversee cleanup.
- Go talk to EPA attny Elizabeth just for a headsup

Next Steps

- Get a decision from Chris/Craig on what EPA should do (based on powerpoint of what can be done)
- Brief Wren using powerpoint
- Need quantity of bags and rad level in two buildings on site (ask James Burgess for this).
- What size bags are they? What rad level? Class A or C
- Planning task order to take samples and send to disposal companies to determine whether Class A or C
 - Talk to James (air building for radar)
 - Get samples (representative) to determine where it can go
- Supersacks in brick building came from gash – maybe put them back in then cap? Or dispose of them. Perhaps fill gash from clean soil on-site.
- Finish Lined Cap (plastic slick material)
- Groundwater – get with START or ERT to develop a plan (maybe a diversion wall)
- Air Monitoring – Has never had a hit – discontinue until on site work starts?
- If the site does rank – use GSA schedule 899 for a local company so we don’t have to pay travel.
